I wish to comment in FAVOR of FCC acceptance RM-10352 as written.

- Adoption of the measure will bring 160-meters into the same usage structure as other bands below UHF, i.e. - designating a specific narrow-mode-only segment.
- Adoption of the measure should eliminate FCC involvement required to resolve disputes and operator conflicts on 160-meters.
- Adoption of the measure will protect all current narrow modes from wide-mode interference, and provide a protected space for development of future narrow mode communications.
- While not an engineering or technical consideration, it only seems right that a portion of the band nearest where the first Amateur Radio activity took place should be reserved for emission types like CW - the first emission type.

Thank you for your consideration.

Sincerely,
Edward L. Stuckey
Amateur Radio Station - K0INT
